

CONDITION-BASED MATCHING

Answer the question on the minds of patients and families: “what treatment options do you have for me?” and deliver site referrals with the same level of pre-qualification as study-specific pre-screeners, without the cost and overhead.

The Challenge

Most clinical trial websites, including ClinicalTrials.gov, can't answer the most basic question that patients and families have: “what treatment options do you have for me (or my loved one)”?

Patients and families wade through lengthy inclusion/exclusion lists one trial at a time. When it comes to pre-qualification for site referrals, study-at-a-time pre-screeners force patients to repeatedly answer the same questions, don't address the needs of the non-qualifying patients for a given study (typically the vast majority), and are expensive to develop and maintain. How do we address all these challenges without sacrificing the pre-qualification specificity of a study-specific pre-screener?

How It Works

- 1 Patient-friendly questionnaires for all relevant conditions in your research portfolio that serve both as individual trial pre-screeners (with no loss of pre-qualification specificity) and for matching to identify relevant trials.
- 2 No need for patients and families to re-enter the same information for each study.
- 3 Enable subscription for notifications about specifically relevant new trials and referral of pre-qualified patients to research sites..
- 4 Incorporate condition-based matching and pre-screening for all trials into your existing clinical trial websites via APIs and widgets.

Highlights

Stop expecting patients and families to check eligibility criteria one study at a time and answer the same questions again and again.

Every trial in your portfolio has pre-screening and matching. Patients not eligible for a trial of interest learn of other relevant options you have.

Bring online new trials and adapt to changes re-using already approved questionnaires to reduce overhead and cost of pervasive pre-screening.

Enhance existing clinical trial websites with matching for all conditions, pre-screening for all trials, and deep campaign analytics.

Carebox has engaged, matched and referred patients to clinical trials for over 20 years.

2M+

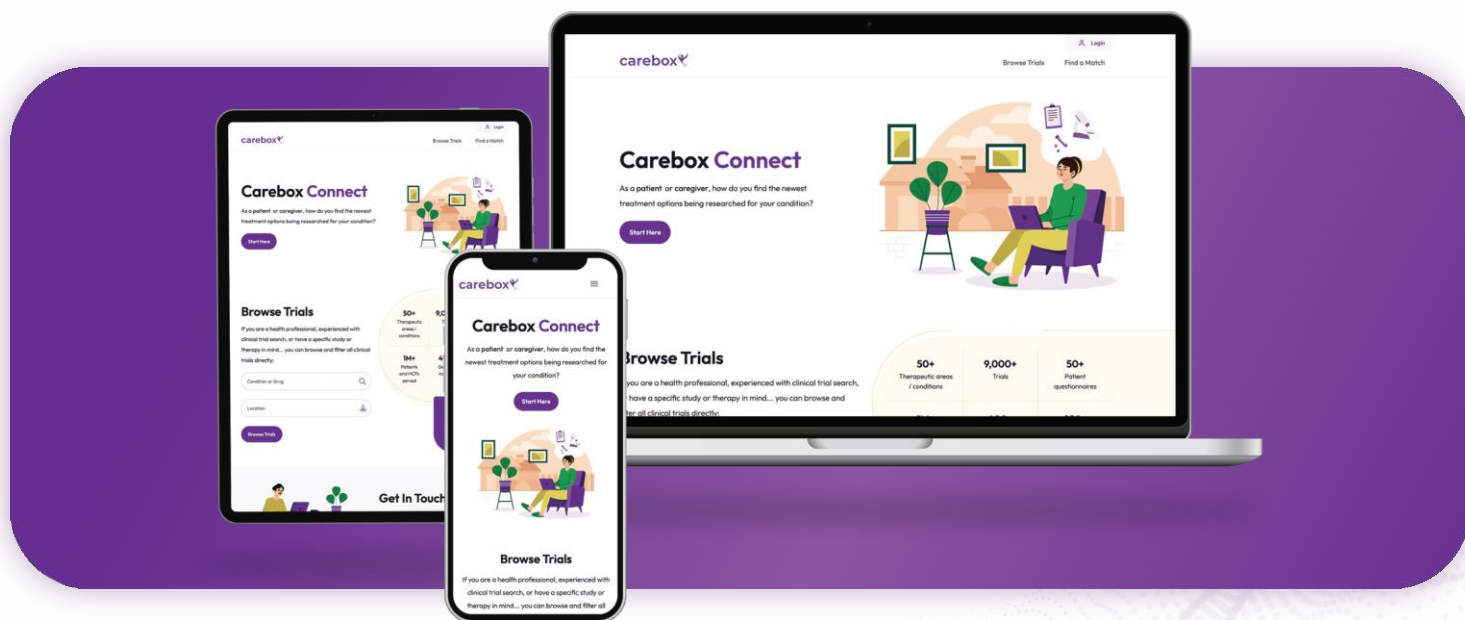

patients, caregivers, and health professionals have used our matching solution to find treatment options in clinical trials.

250K+

patients, caregivers & health professional have engaged with our clinical trial navigator call center agents.

300+

biotech, pharma, medical centers, advocacy organizations, etc. have implemented the Carebox Connect platform.

Carebox Connect Solutions

Serving over two million patients and doctors, Carebox Connect powers clinical trial patient engagement, matching/pre-screening, and site referrals for leading pharma companies, research centers, and patient advocacy groups. With unique capabilities available with no other service or platform, scalability from single studies to full portfolios of hundreds of trials, and a wide range of deployment models – there's a Carebox Connect solution for you!
